Function: Management of prototyping process for new devices

Position: Full-time

Location: Shiga, Japan

Your Tasks

- Technical and commercial responsibility for our customer projects
- Responsibility for complete project execution including required quality, time- and cost/budget management
- Optimization of development process (NPI) in close collaboration with R&D, quality, sales, marketing and customers
- Project Management, Customer Support from sample to Mass production
- Clearly define customers' requirements for new prototyping work
 - Collect information on requirements and wants, directly from the customers
 - Conduct and manage design reviews
- Check drawings provided by customers and VTS.
- Craft and conclude delivery specifications for prototypes.
 - Give specification proposal, align with customers, negotiate and conclude the specifications
- Deal with quality issues on prototypes.
- Clearly define the nature of defects (collect data from and interview customers)
 - Compile analysis report and give explanation to customers.
 - Negotiate compensation with customers

Your Requirements

Mandatory

- Master degree in electronics, mechatronics, optoelectronics, or equivalent
- Fluent in Japanese language (speaking, writing, reading), native in Japanese is a plus
- Previous experience of project management work at electronic device (or parts) makers.
- Previous working experience at ISO 9000 series certified companies, with experience of internal auditing work
- Knowledge about project planning with project management related software (e.g. Microsoft Project or similar)
- Communication skills in English language (capable of engaging in technical discussions over the phone)
- Ability to analyze defective products and capability to write analysis report in English.

- Ability to read machine drawings.
- Flexible, structured, customer and Goal oriented personality
- Team player, communicative

Preferred

- Chinese (ability to write e-mails and orally communicate in Chinese, in addition will be even better)
- Previous working experience at IATF 16949 certified companies.
- Knowledge (photolithography, etching, plating) on electrical circuit formation processes.
- Experience of quality control at electronic devices (or parts) makers.
- Experience of quality control at on-vehicle devices (or parts) makers.
- Administrative background regarding budget planning and cost controlling
